<b>Preface</b>	<b>xiii</b>
<b>Part I: Fundamentals of Bayesian Inference</b>	<b>1</b>
<b>1 Probability and inference</b>	<b>3</b>
1.1 The three steps of Bayesian data analysis	3
1.2 General notation for statistical inference	4
1.3 Bayesian inference	6
1.4 Discrete probability examples: genetics and spell checking	8
1.5 Probability as a measure of uncertainty	11
1.6 Example of probability assignment: football point spreads	13
1.7 Example: estimating the accuracy of record linkage	16
1.8 Some useful results from probability theory	19
1.9 Computation and software	22
1.10 Bayesian inference in applied statistics	24
1.11 Bibliographic note	25
1.12 Exercises	27
<b>2 Single-parameter models</b>	<b>29</b>
2.1 Estimating a probability from binomial data	29
2.2 Posterior as compromise between data and prior information	32
2.3 Summarizing posterior inference	32
2.4 Informative prior distributions	34
2.5 Estimating a normal mean with known variance	39
2.6 Other standard single-parameter models	42
2.7 Example: informative prior distribution for cancer rates	47
2.8 Noninformative prior distributions	51
2.9 Weakly informative prior distributions	55
2.10 Bibliographic note	56
2.11 Exercises	57
<b>3 Introduction to multiparameter models</b>	<b>63</b>
3.1 Averaging over ‘nuisance parameters’	63
3.2 Normal data with a noninformative prior distribution	64
3.3 Normal data with a conjugate prior distribution	67
3.4 Multinomial model for categorical data	69
3.5 Multivariate normal model with known variance	70
3.6 Multivariate normal with unknown mean and variance	72
3.7 Example: analysis of a bioassay experiment	74
3.8 Summary of elementary modeling and computation	78
3.9 Bibliographic note	78
3.10 Exercises	79

<b>4 Asymptotics and connections to non-Bayesian approaches</b>	<b>83</b>
4.1 Normal approximations to the posterior distribution	83
4.2 Large-sample theory	87
4.3 Counterexamples to the theorems	89
4.4 Frequency evaluations of Bayesian inferences	91
4.5 Bayesian interpretations of other statistical methods	92
4.6 Bibliographic note	97
4.7 Exercises	98
<b>5 Hierarchical models</b>	<b>101</b>
5.1 Constructing a parameterized prior distribution	102
5.2 Exchangeability and setting up hierarchical models	104
5.3 Fully Bayesian analysis of conjugate hierarchical models	108
5.4 Estimating exchangeable parameters from a normal model	113
5.5 Example: parallel experiments in eight schools	119
5.6 Hierarchical modeling applied to a meta-analysis	124
5.7 Weakly informative priors for hierarchical variance parameters	128
5.8 Bibliographic note	132
5.9 Exercises	134
<b>Part II: Fundamentals of Bayesian Data Analysis</b>	<b>139</b>
<b>6 Model checking</b>	<b>141</b>
6.1 The place of model checking in applied Bayesian statistics	141
6.2 Do the inferences from the model make sense?	142
6.3 Posterior predictive checking	143
6.4 Graphical posterior predictive checks	153
6.5 Model checking for the educational testing example	159
6.6 Bibliographic note	161
6.7 Exercises	163
<b>7 Evaluating, comparing, and expanding models</b>	<b>165</b>
7.1 Measures of predictive accuracy	166
7.2 Information criteria and cross-validation	169
7.3 Model comparison based on predictive performance	178
7.4 Model comparison using Bayes factors	182
7.5 Continuous model expansion	184
7.6 Implicit assumptions and model expansion: an example	187
7.7 Bibliographic note	192
7.8 Exercises	193
<b>8 Modeling accounting for data collection</b>	<b>197</b>
8.1 Bayesian inference requires a model for data collection	197
8.2 Data-collection models and ignorability	199
8.3 Sample surveys	205
8.4 Designed experiments	214
8.5 Sensitivity and the role of randomization	218
8.6 Observational studies	220
8.7 Censoring and truncation	224
8.8 Discussion	229
8.9 Bibliographic note	229
8.10 Exercises	230

<b>9 Decision analysis</b>	<b>237</b>
9.1 Bayesian decision theory in different contexts	237
9.2 Using regression predictions: incentives for telephone surveys	239
9.3 Multistage decision making: medical screening	245
9.4 Hierarchical decision analysis for radon measurement	246
9.5 Personal vs. institutional decision analysis	256
9.6 Bibliographic note	257
9.7 Exercises	257
<b>Part III: Advanced Computation</b>	<b>259</b>
<b>10 Introduction to Bayesian computation</b>	<b>261</b>
10.1 Numerical integration	261
10.2 Distributional approximations	262
10.3 Direct simulation and rejection sampling	263
10.4 Importance sampling	265
10.5 How many simulation draws are needed?	267
10.6 Computing environments	268
10.7 Debugging Bayesian computing	270
10.8 Bibliographic note	271
10.9 Exercises	272
<b>11 Basics of Markov chain simulation</b>	<b>275</b>
11.1 Gibbs sampler	276
11.2 Metropolis and Metropolis-Hastings algorithms	278
11.3 Using Gibbs and Metropolis as building blocks	280
11.4 Inference and assessing convergence	281
11.5 Effective number of simulation draws	286
11.6 Example: hierarchical normal model	288
11.7 Bibliographic note	291
11.8 Exercises	291
<b>12 Computationally efficient Markov chain simulation</b>	<b>293</b>
12.1 Efficient Gibbs samplers	293
12.2 Efficient Metropolis jumping rules	295
12.3 Further extensions to Gibbs and Metropolis	297
12.4 Hamiltonian Monte Carlo	300
12.5 Hamiltonian dynamics for a simple hierarchical model	305
12.6 Stan: developing a computing environment	307
12.7 Bibliographic note	308
12.8 Exercises	309
<b>13 Modal and distributional approximations</b>	<b>311</b>
13.1 Finding posterior modes	311
13.2 Boundary-avoiding priors for modal summaries	313
13.3 Normal and related mixture approximations	318
13.4 Finding marginal posterior modes using EM	320
13.5 Approximating conditional and marginal posterior densities	325
13.6 Example: hierarchical normal model (continued)	326
13.7 Variational inference	331
13.8 Expectation propagation	338
13.9 Other approximations	343

13.10 Unknown normalizing factors	345
13.11 Bibliographic note	348
13.12 Exercises	349
<b>Part IV: Regression Models</b>	<b>351</b>
<b>14 Introduction to regression models</b>	<b>353</b>
14.1 Conditional modeling	353
14.2 Bayesian analysis of the classical regression model	354
14.3 Regression for causal inference: incumbency in congressional elections	358
14.4 Goals of regression analysis	364
14.5 Assembling the matrix of explanatory variables	365
14.6 Regularization and dimension reduction for multiple predictors	367
14.7 Unequal variances and correlations	369
14.8 Including numerical prior information	376
14.9 Bibliographic note	378
14.10 Exercises	378
<b>15 Hierarchical linear models</b>	<b>381</b>
15.1 Regression coefficients exchangeable in batches	382
15.2 Example: forecasting U.S. presidential elections	383
15.3 Interpreting a normal prior distribution as additional data	388
15.4 Varying intercepts and slopes	390
15.5 Computation: batching and transformation	392
15.6 Analysis of variance and the batching of coefficients	395
15.7 Hierarchical models for batches of variance components	398
15.8 Bibliographic note	400
15.9 Exercises	402
<b>16 Generalized linear models</b>	<b>405</b>
16.1 Standard generalized linear model likelihoods	406
16.2 Working with generalized linear models	407
16.3 Weakly informative priors for logistic regression	412
16.4 Example: hierarchical Poisson regression for police stops	420
16.5 Example: hierarchical logistic regression for political opinions	422
16.6 Models for multivariate and multinomial responses	423
16.7 Loglinear models for multivariate discrete data	428
16.8 Bibliographic note	431
16.9 Exercises	432
<b>17 Models for robust inference</b>	<b>435</b>
17.1 Aspects of robustness	435
17.2 Overdispersed versions of standard probability models	437
17.3 Posterior inference and computation	439
17.4 Robust inference and sensitivity analysis for the eight schools	441
17.5 Robust regression using $t$ -distributed errors	444
17.6 Bibliographic note	445
17.7 Exercises	446

<b>18 Models for missing data</b>	<b>449</b>
18.1 Notation	449
18.2 Multiple imputation	451
18.3 Missing data in the multivariate normal and $t$ models	454
18.4 Example: multiple imputation for a series of polls	456
18.5 Missing values with counted data	462
18.6 Example: an opinion poll in Slovenia	463
18.7 Bibliographic note	466
18.8 Exercises	467
<b>Part V: Nonlinear and Nonparametric Models</b>	<b>469</b>
<b>19 Parametric nonlinear models</b>	<b>471</b>
19.1 Example: serial dilution assay	471
19.2 Example: population toxicokinetics	477
19.3 Bibliographic note	485
19.4 Exercises	486
<b>20 Basis function models</b>	<b>487</b>
20.1 Splines and weighted sums of basis functions	487
20.2 Basis selection and shrinkage of coefficients	490
20.3 Non-normal models and multivariate regression surfaces	494
20.4 Bibliographic note	498
20.5 Exercises	498
<b>21 Gaussian process models</b>	<b>501</b>
21.1 Gaussian process regression	501
21.2 Example: birthdays and birthdates	505
21.3 Latent Gaussian process models	510
21.4 Functional data analysis	512
21.5 Density estimation and regression	513
21.6 Bibliographic note	516
21.7 Exercises	516
<b>22 Finite mixture models</b>	<b>519</b>
22.1 Setting up and interpreting mixture models	519
22.2 Example: reaction times and schizophrenia	524
22.3 Label switching and posterior computation	533
22.4 Unspecified number of mixture components	536
22.5 Mixture models for classification and regression	539
22.6 Bibliographic note	542
22.7 Exercises	543
<b>23 Dirichlet process models</b>	<b>545</b>
23.1 Bayesian histograms	545
23.2 Dirichlet process prior distributions	546
23.3 Dirichlet process mixtures	549
23.4 Beyond density estimation	557
23.5 Hierarchical dependence	560
23.6 Density regression	568
23.7 Bibliographic note	571
23.8 Exercises	573

<b>A Standard probability distributions</b>	<b>575</b>
A.1 Continuous distributions	575
A.2 Discrete distributions	583
A.3 Bibliographic note	584
<b>B Outline of proofs of limit theorems</b>	<b>585</b>
B.1 Bibliographic note	588
<b>C Computation in R and Stan</b>	<b>589</b>
C.1 Getting started with R and Stan	589
C.2 Fitting a hierarchical model in Stan	589
C.3 Direct simulation, Gibbs, and Metropolis in R	594
C.4 Programming Hamiltonian Monte Carlo in R	601
C.5 Further comments on computation	605
C.6 Bibliographic note	606
